

Conference Call Specs

Week 10

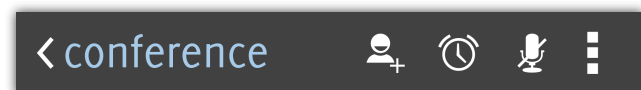

Conference Space

- Circular layout. The user is anchored at the bottom.
- There are predetermined spots where people can be moved to; these spots will match the number that attend.
- Moving people from one space to another will be done by dragging and dropping. The two people's locations in the space will be swapped.
- Page Indicator Dots will let the user know they can swipe between main and side chats.
- Conferences are capped at 10 people.
- User's profile pictures will represent him/her and are not displayed until icon is tapped.

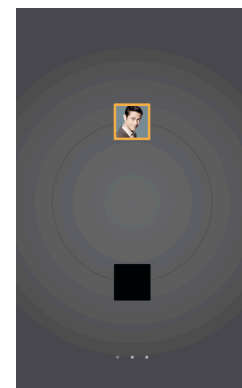

Action Bar

- Action Bar is hidden until the user taps on white space.
- Action Bar contains the following actions: Invite, Ping, Mute, and Overflow
- The "Ping" action will indicate to all users to return to the main space. It will vibrate the phone and create a "ping" sound.
- A context bar appears at the bottom in conjunction with the Action bar.
- For the moderator, the Context Bar will include options to leave conference and end conference.
- Context Bar for users displays profile and add to contact

Side Chats

- Swipe space to enter a side chat
- One user can be in at most 2 side chats
- The Side Chat Space will have a dark background
- The Action Bar remains the same except for the "Ping" option
- Context Bar remains consistent with the Main Space for users and moderators

- Invitations are displayed in the Context Bar. The user can select to open in either a space to the left or the right
- If a user is already in 2 side chats and is invited to another while still in a side chat, the user has the option to either replace the existing one he/she is in, or the space to the left/right (depending on which one he/she is in).

A Note about Moderators

- Moderators have a few privileges, such as adding or removing people from a conference/side chat.
- Moderators are indicated with a symbol next to their icon at all times
- When a moderator leaves and chooses not to end the conference, the rights must be passed on (through the choice of the exiting moderator). Moderator status will be automatically reflected on the chosen user's Context Bar.
- If a moderator leaves the side chat, rights will automatically transfer to the user who has been in it the longest.
